

## Stilwell Baker Opens Design Center In Vancouver, Washington

**Portland, Ore. – November 6, 2008** – Stilwell Baker Inc. (SBI), a leading Printed Circuit Board (PCB) Design company, has announced the opening of a new design center in Vancouver, WA. Stilwell Baker's expansion supports the company's continued growth in the Pacific Northwest.

The 3,000 square foot Vancouver design center will be Stilwell Baker's core location for design for manufacturing and component engineering. The new facility incorporates state-of-the-art workstations in a highly secure network environment with an emphasis on responsiveness and integrated communications to ensure that customers have immediate access to information and resources.

Darrel Baker, President, Stilwell Baker commented, "Stilwell Baker's growth and expansion allows us to further enhance our excellent support, providing our customers with the best services both on and off the customer's site. This approach allows us to manage and deliver design projects in a timely and cost effective manner."

Stilwell Baker provides PCB design services and design for manufacturing solutions that enable customers to stay competitive in an environment that demands lower costs, higher quality, and faster printed circuit boards in a shortened time-to-market. Stilwell Baker's comprehensive approach to physical PCB design delivers faster turnaround with fewer errors and design spins

Dennis Storz, Director, Platform Integration, Lightfleet Corporation commented, "Stilwell Baker has been a significant contributor to the development of Lightfleet's flagship product. Working both onsite and offsite we have had our engineers working side by side with Stilwell Baker employees and have realized significant improvements in efficiency and quality due to our partnership. We have found them to be professional, flexible, creative, knowledgeable and highly competent in all aspects of complex high-speed board layout."

### **About Stilwell Baker**

Stilwell Baker provides value-added PCB Design, library management, component engineering, DFX & Physicalization, and electrical design for customers in the Semiconductor, Consumer, Wireless, and Military industries. PCB design services include high speed, RoHS, high density, Military/Avionics, DFM/DFT/DFA, embedded controllers, high volume/low cost, and tester interface boards. The company was founded by Barbara Stilwell-Baker and Darrel Baker in 1993 and is headquartered in Portland, Oregon. The company is privately held.
